The rates should provide the owner-driver with a **realistic income** after covering the cost of running and maintaining the vehicle and an **adequate return on the owner-driver's investment**.

The rates have been calculated by the TWU after much consultation with the industry using **industry standards for the age of vehicles**.

A very comprehensive range of owner-driver costs have been used in the calculations.

They include cost, interest, equipment, registration, maintenance, business administration, insurance, super, finance, compliance with regulations and labour costs.

**SEMI's HOURLY RATE is \$120 + GST**
